Allergies are a progressive disease. If they are not properly managed, symptoms may become worse.

I can not be happier with the experience that I have had with Nextmune*... Roxie's allergies were definitely more manageable.

THEY CAN'T TELL YOU WHAT THEY ARE ALLERGIC TO...

That's where we come in!

FIVE STEPS TO GETTING YOUR PET ON THE ROAD TO RECOVERY

1 COMFORT THERAPIES (CTs)

While CTs are convenient for short-term allergy relief, they are not treating the root cause of the allergy.

2 ALLERGY TESTING

CTs can be more expensive than allergy treatment (especially if your pet's symptoms extend beyond a certain season) & allow symptoms to worsen until the therapy stops providing relief.

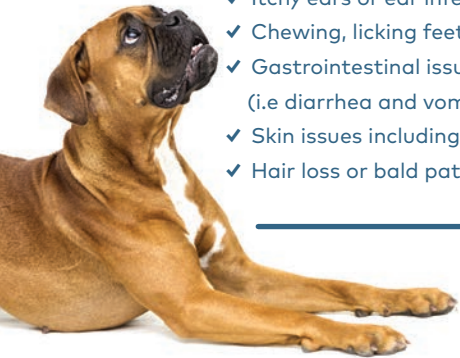

Your vet can order our SPOT Platinum+ allergy test by submitting a blood sample.

Test for up to 91 common allergens in your area – including weeds, trees, grasses, as well as indoor & food proteins.

✓ Symptom Checker

- ✓ Itchy, watery eyes
- ✓ Runny nose or snorting
- ✓ Itchy ears or ear infection
- ✓ Chewing, licking feet/pads
- ✓ Gastrointestinal issues (i.e diarrhea and vomiting)
- ✓ Skin issues including infection
- ✓ Hair loss or bald patches

4 ALLERGY TREATMENT

We formulate all-natural hypo-sensitization treatment made of microscopic concentrations of allergens your pet has reacted to.

Hypo-sensitization therapy, allows the immune system to safely acclimate to the allergens' existence in their body.

Treatment is available as injections or drops.

3 TEST RESULTS

Your pet's test results arrive in a comprehensive booklet.

The booklet provides treatment recommendations, dietary suggestions, & an allergy-proofing guide.

Allergy treatment is a long-term process. You must continue treatment, for as long as you wish your pet to experience relief.

5 REAL RELIEF

The immune system acclimates and stops producing the reaction. It can take 4-6 months before you see results.
